

ELOQUEST

ABOUT ELOQUEST

Sarah Holschneider
Co-Founder

Lionel Born
Co-Founder

- We are an NLP service provider that develops and provides customized software solutions on behalf of our clients, offering long-term support.
- The assistant programs are developed in collaboration with the customer according to their requirements and preferences.
- The expertise of our client and the technical knowledge on our side are combined to build a software assistant that supports the client's work.

TEAM

- The team met at their previous employer, a software service provider, and consists of computational linguists and a mathematician.
- Working together for medical writing clients led to the realization that the industry needs bridge builders who are knowledgeable in both texts and their automation.
- This realization led to the decision in 2022 to spin off as an independent company and give NLP the stage it deserves.

What we offer

- 1) NLP Consultancy.** We offer guidance through the maze of AI possibilities. When can LLMs be profitably deployed in your company? Where is your level of digitization still insufficient? Would automating your reporting be worthwhile? We provide advice and support on all these questions and calculate the benefits and costs for you.
- 2) NLP Software Development.** Document generation, text analysis, and paraphrasing of existing texts are just examples of applications where knowledge of natural languages and software applications must come together. Texts in their linguistic refinement as well as in their formal design are our expertise. We build software whose implementation goes beyond the application of LLMs.
- 3) Expert Systems.** Even though the hype around LLMs is currently distracting: Most business processes cannot be accelerated solely through the automation of linguistic tasks. Knowledge management and the inclusion of user groups are necessary to develop useful BI products. Eloquest expert systems bridge the gap between knowledge management and linguistic expression.

HOW TO GET YOUR ELOQUEST EXPERT SYSTEM

- **Workshop:** We dive into example documents, ask questions, and develop a timeline for the adaptation phase
- **Adaptation:** Implementation of business logic, setting up the system
- **Maintenance contract:** Support for changes in business logic and when encountering new document types
